HA STEEL DOORS

HA STEEL DOORS

INTERNAL STEEL DOORS

Created for your space.

Designed and made in Yorkshire.

STYLE GUIDE

Choose the lines that suit your space. From clean, simple divisions to elegant inset frames and curved details, each layout offers a distinctive way to frame the glass and shape the character of your doors.

These layouts provide a starting point. Bar placement and proportions can be refined to complement your opening, your proportions and your chosen door system.

A considered approach to every detail

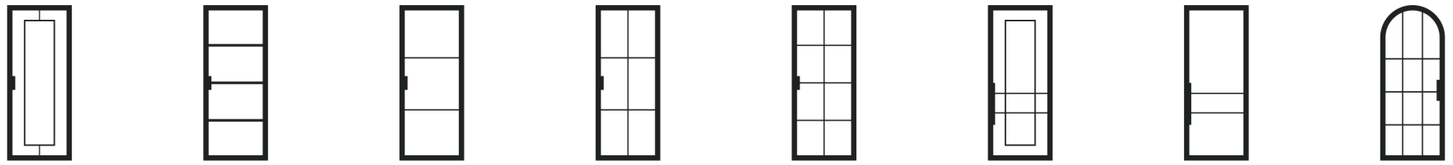

Pocket doors require suitable wall construction. Fixed side panels and over-door glazing can also be incorporated where appropriate.

Explore our door systems on pages 3–6 and discover the full range of finishes on page 8.

Illustrations are indicative and show bar layouts rather than exact dimensions. Available configurations vary according to the chosen door system, with fire-rated designs specified separately.

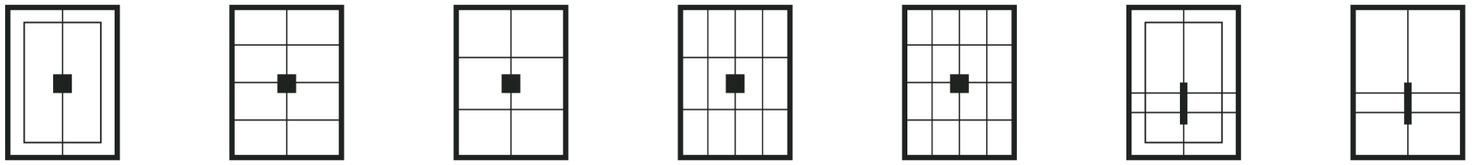

When discussing your design, simply refer to the layout number shown beneath each illustration.

Slides into the wall

SINGLE AND DOUBLE DOORS

Frame the view from one room to the next. A glazed steel door gives each space a defined edge while keeping the rooms visually connected.

A single door suits an individual doorway; double doors open up a wider passage between rooms. Add fixed glazing beside or above the doors to make use of a larger opening.

Each arrangement is made to measure, with the bar pattern, glass and finish chosen to suit your interior.

Arched and curved designs

Choose a fully arched single door or introduce curved glazing bars within a rectangular frame. Our style guide shows both approaches, from a single offset curve to paired doors with arched detailing.

SLIDING AND POCKET DOORS

Open the doors for a gathering. Close them when you want separate rooms. Sliding steel doors let you change the way adjoining spaces work throughout the day.

The panels move sideways, keeping the area in front of the opening free from a door swing. Choose a single or double arrangement, with the glazing pattern and finish carried through from the rest of your interior.

Pocket doors

Where the wall construction allows, a pocket system conceals the open door within the wall. Speak to us early in your project so we can consider the space and construction needed.
Ask about soft-close options for your chosen system.

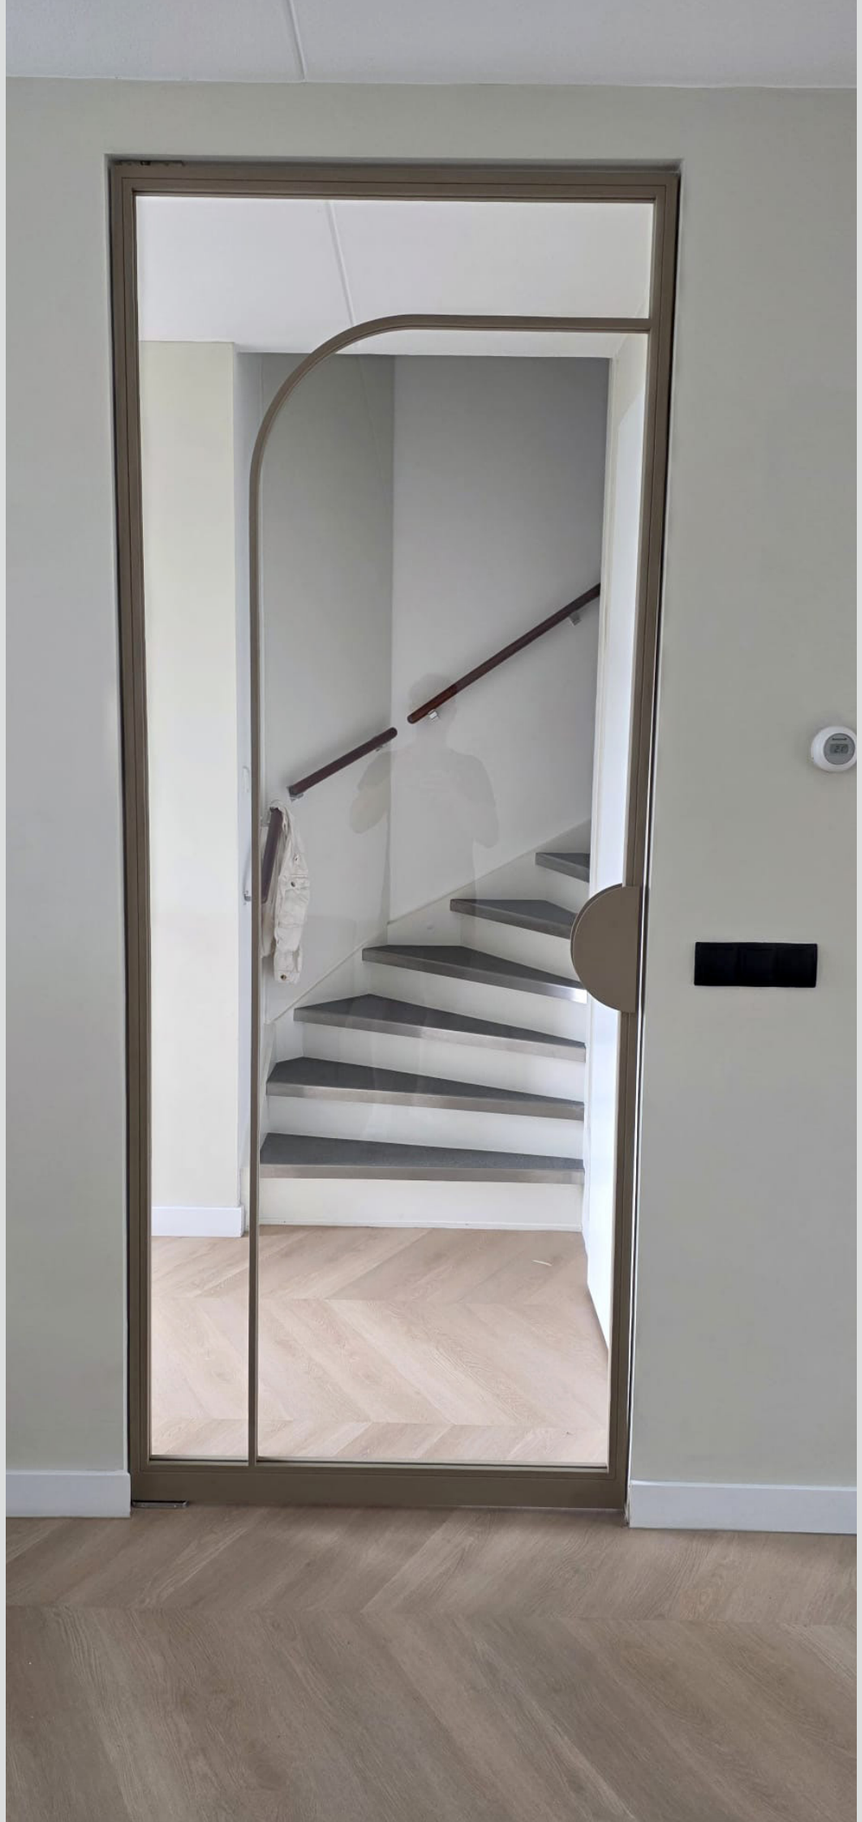

PIVOT DOORS

The way a pivot door opens is part of its appeal. The panel rotates around a pivot set in from the edge, making the opening movement part of the design.

A single door can stand alone or sit within a wider glazed screen. Paired pivot doors create a broader opening, with the bar pattern bringing the two leaves together as one design.

We will consider the panel size, opening clearance and suitable mechanism with you, planning the proportions around the room and the way you will use it.

SCREENS AND PARTITIONS

Give a home office a room of its own, or separate the kitchen from the living area. Steel and glass partitions help you make more of an open-plan layout while allowing daylight to pass between spaces.

Use fixed glazing to divide a room, or combine it with doors to create access where you need it. The frames and bar pattern are planned across the whole arrangement.

Around the corner

For an enclosure within a larger room, ask us about glazing that continues around a corner. We will help you explore the layout, including where the door sits and how the panels meet.

FIRE RATED DOORS

When fire protection forms part of your project, glazed steel doors can keep light and the view between rooms in the design.

We offer fire-rated options for residential and commercial interiors, including single and double doors and fixed screens where the specification allows.

Share your plans and required fire performance with us at the enquiry stage. We will explain the available configurations and the glazing, frame and hardware options suitable for your project.

Fire-rated doors are specified as a complete system. Sizes, finishes and design choices depend on the selected system and its fire performance.

BESPOKE DETAILS

Make it yours

The same door can feel very different with a change of glass, a warmer finish or a different handle. These are the details you will see and touch every day.

GLAZING BARS

Keep the glass largely clear, introduce horizontal divisions or choose a grid. Explore inset frames and curved details in our style guide, or bring a sketch for us to discuss.

ART DECO

BAU

FLAT TAPERED LEVER

GIO PONTE

PULL HANDLE

HANDLES

Choose your hardware, from simple levers and knurled grips to pull bars and circular handles. We'll guide you through the options to suit your chosen door system.

COLOUR AND FINISH

Black gives the frame a strong outline. Bronze tones bring warmth. Powder-coated RAL colours offer scope to work with the walls, joinery and other finishes in your room.

GLASS

Clear glass keeps the view open. Reeded or fluted glass adds texture and softens visibility. Frosted glass offers greater privacy; tinted options introduce a darker tone.

MANUFACTURE AND PROCESS

The detail starts long before the door is made. A beautiful door is about more than the finished frame. It's about proportion, balance, sightlines and the way it sits within the architecture around it.

Our designers, makers and installers work as one throughout your project, bringing together creative thinking, technical expertise and years of experience. The result is something that feels considered from every angle, and entirely at home in your space.

1 **Start with your space**

Share your plans, photographs and approximate dimensions, and tell us how you'd like the space to look, feel and function.

2 **Develop the details**

We'll work with you to explore the layout, proportions, finishes and hardware, refining the design around your space before providing your quotation and current lead time.

3 **Finalise the fit**

Once you're ready to proceed, we'll carry out a detailed site survey to confirm every measurement and installation requirement.

4 **Made, fitted, finished**

Your doors are crafted to the final specification, then carefully installed by our team. We'll make sure every detail is right and the doors operate exactly as they should.

WORK WITH US

A fully resolved scheme, a few drawings, a photograph or simply an idea you can't quite put into words, wherever your project begins, we can help shape what comes next.

Share your plans or approximate opening dimensions and we'll start exploring the possibilities with you.

If you'd like to experience the doors in person, visit our Huddersfield showroom to see the craftsmanship, finishes and details up close, or find an approved showroom partner near you on our website.

Please call us on 01484 941301 to discuss your project or email info@ha-steeldoors.co.uk
